Ideation Phase
Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	_____
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: The Incident form in ServiceNow may allow users to submit incomplete or inappropriate information, which can reduce data quality and make incident handling less consistent.

Project Goal: Implement a Client Script and UI Policy on the Incident form to dynamically control field behavior and provide appropriate validation and guidance to users.

Key Need: Identify which Incident fields should become mandatory, visible, hidden, or read-only based on the selected conditions such as Incident state, priority, or other form values.

Proposed Solution: Use UI Policy for dynamic field properties and Client Script for client-side validation and user interaction.

Step-2: Brainstorm, Idea Listing and Grouping

Brainstormed Ideas:

Idea Grouping: • Mandatory-field control • Field visibility/read-only control • Client-side validation and user guidance

1. Make Short Description mandatory.
2. Make Description mandatory when additional details are required.
3. Make Assignment Group mandatory under the required condition.
4. Make selected Incident fields read-only after a particular state.
5. Show or hide fields based on Incident state/priority.
6. Use Client Script to validate user input and display a helpful message.
7. Use UI Policy Actions to control mandatory, visible, and read-only properties.

Priority 2 – Client Script: Validate Incident information and provide immediate user guidance when required.

Priority 3 – State/Priority-based behavior: Apply different field rules according to the Incident condition.

Final Selection: Combine the Client Script and UI Policy to improve Incident form usability and data quality.

Priority 1 – UI Policy: Control mandatory, visible, and read-only properties of Incident fields based on defined conditions.
