Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

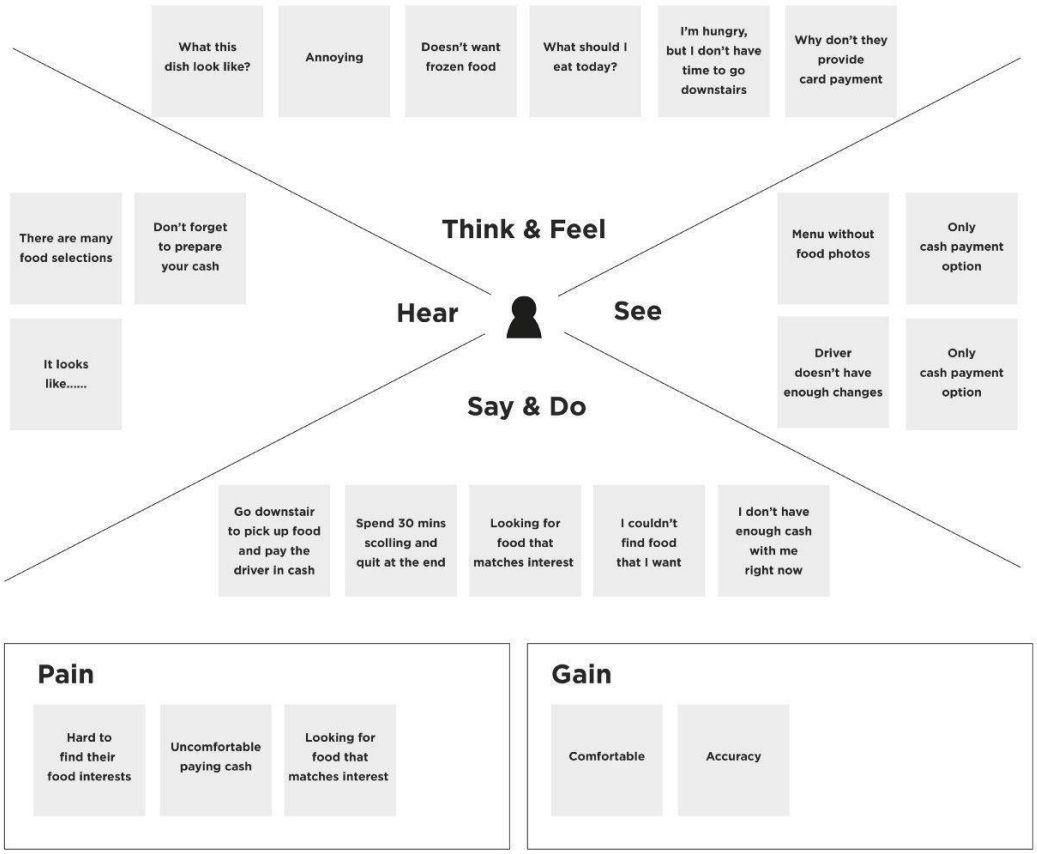

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Project-Specific Empathy Map:

Project Reference: ServiceNow Incident Management – Client Script & UI Policy

Example: Incident Management using Client Script & UI Policy

Empathy Map – Incident Form User

Says • I need to create and update Incident records quickly. • The form should clearly tell me which fields are required. • I want the form to respond automatically to my selections.	**Thinks** • Which fields are mandatory for this Incident? • Will the selected values make other fields visible or read-only? • I want to avoid entering incorrect or incomplete information.
Does • Creates and updates Incident records. • Selects Incident fields such as Category, Subcategory, Impact and Urgency. • Checks and enters the required information before submitting the Incident.	**Feels** • Confused when unnecessary fields are displayed. • Concerned when required information is not clearly indicated. • More confident when the form guides the user automatically.
Pains • Too many fields can make the Incident form difficult to use. • Missing mandatory information can delay Incident submission. • Incorrect or inconsistent data entry can affect Incident handling.	**Gains** • A simple and guided Incident form. • Automatic field visibility and mandatory/read-only control. • Faster Incident creation with better data consistency.
