Project Design Phase-II
Data Flow Diagram & User Stories

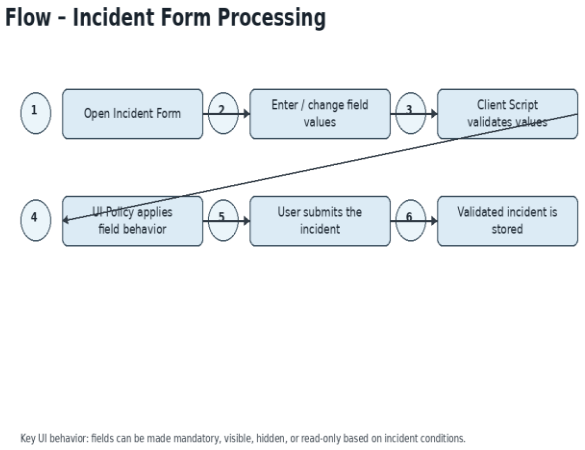

Date	31 January 2025
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) represents how incident information moves through the Incident form, Client Script validation, UI Policy rules, and the Incident table. It shows how user input is processed, how field behavior is controlled, and where the incident record is stored.

Example: DFD Level 0 (Industry Standard)

Example: (Simplified)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Incident User	Incident Form	USN-1	As a user, I can open the Incident form and enter the required incident details.	Incident form opens and required fields are available.	High	Sprint-1
	Client Script	USN-2	As a user, I can receive client-side validation when I enter invalid incident information.	Invalid values are detected and a clear validation message is displayed.	High	Sprint-1
	Client Script	USN-3	As a user, I can see field values update automatically when an incident field changes.	The configured client script runs on the required field change.	High	Sprint-1
	UI Policy	USN-4	As a user, I can see incident fields become mandatory when the defined condition is met.	The configured field is marked mandatory for the applicable condition.	High	Sprint-1
	UI Policy	USN-5	As a user, I can see incident fields become visible or hidden based on incident conditions.	Field visibility changes correctly when the condition is met.	Medium	Sprint-1
Service Desk Agent	Incident Processing	USN-6	As an agent, I can edit incident details and receive the configured client-side checks.	The agent can edit permitted fields and validation rules are applied.	High	Sprint-2
	Incident Processing	USN-7	As an agent, I can submit an incident only after the required client-side conditions are satisfied.	Submission is allowed when required conditions are satisfied.	High	Sprint-2
Administrator	Configuration	USN-8	As an administrator, I can create and update Client Scripts for the Incident form.	Client Script configuration is saved and runs on the selected form event.	High	Sprint-2
	Configuration	USN-9	As an administrator, I can create and update UI Policies for Incident fields.	UI Policy conditions and field actions are saved correctly.	High	Sprint-2
	Testing	USN-10	As an administrator, I can test Client Scripts and UI Policies against different incident conditions.	Configured behaviors are verified for positive and negative test cases.	Medium	Sprint-2
