Project Design Phase
Problem – Solution Fit Template

Date	15 February 2025
Team ID	_____
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

For the Incident form in ServiceNow, users need clear and consistent form behavior while creating and updating incidents. Client Scripts and UI Policies provide a suitable solution by controlling field behavior on the client side, improving data entry, reducing errors, and making required or visible fields respond to incident conditions.

Purpose:

- ❑ ❑ Identify the form-behavior problems faced by users while working with Incident records.
- ❑ ❑ Use Client Scripts to dynamically validate or set field values based on user actions.
- ❑ ❑ Use UI Policies to control field visibility, mandatory status, and read-only behavior.
- ❑ ❑ Reduce incorrect or incomplete Incident information through consistent client-side controls.
- ❑ ❑ Improve the usability and consistency of the Incident form for support teams.

Template:

Target Users: Service desk agents and users who create or update Incident records.

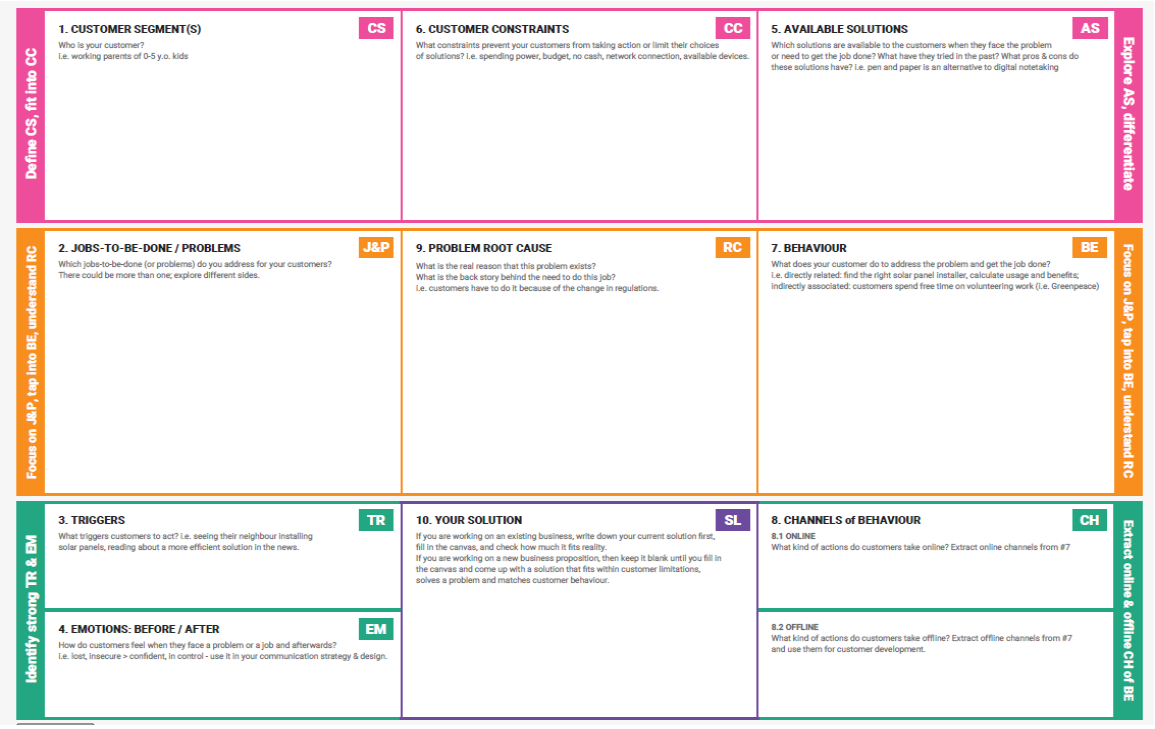

Problem: Incident forms may allow incomplete, inconsistent, or inappropriate field entries. Users may also have to manually manage field states when incident conditions change.

User Need: Users need an Incident form that automatically guides data entry and changes field behavior according to the selected incident information.

Proposed Solution: Implement Client Scripts and UI Policies on the Incident table to validate inputs and dynamically control field visibility, mandatory status, and read-only behavior.

Expected Benefit: Fewer data-entry errors, better-quality Incident records, improved user experience, and more consistent Incident management.

Problem–Solution Fit: The solution directly addresses the identified form-behavior and data-quality problems by applying automatic client-side rules at the time users interact with the Incident form.
