Project Overview:

Project Name: Implement Client Script and UI Policy (Incident)

Project Description: Implement Client Scripts and UI Policies on the Incident form to validate inputs and control field behavior.

Project Version: 1.0

Testing Period: [Start Date] to [End Date]

Testing Scope:

Client Script validation, automatic field updates, UI Policy field visibility, mandatory fields, and read-only behavior.

Incident form should apply Client Script and UI Policy rules correctly based on configured conditions.

Testing Environment:

URL/Location: [Web URL or Application Location]

Credentials (if required): [Username/Password]

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Validate Incident form using Client Script	1. Open Incident form 2. Enter/change required field values 3. Submit the Incident	Client Script executes correctly and validates/updates the Incident fields as configured.	Client Script executed successfully and the configured validation was applied.	Pass
TC-002	Validate UI Policy behavior on Incident form	1. Open Incident form 2. Select the configured condition 3. Observe affected fields	Configured fields become visible/hidden, mandatory, or read-only according to the UI Policy.	UI Policy applied the expected field behavior.	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No defect identified during UAT	Not Applicable	Low	Closed	Client Script and UI Policy behavior verified.
TC-002	Validate UI Policy behavior on Incident form	1. Open Incident form 2. Select the configured condition 3. Observe affected fields	Configured fields become visible/hidden, mandatory, or read-only according to the UI Policy.	UI Policy applied the expected field behavior.	Pass

Sign-off:

Tester Name: [Name of Tester]

Date: [Date of Test Completion]

Signature: [Tester's Signature]

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
